

Scan to Email Configuration for Workforce X700 Series Printers

Technical Tip

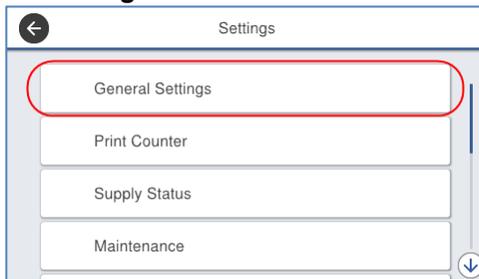

This technical tip will assist you in configuring your printer to scan to an SMTP email server or to attach your scan to your email client for WF-3720, WF-4720, WF-4740, WF-7710 and WF-7720 series printers. You will need to have your SMTP email server details handy which can be obtained by your email service provider; however we have included a list of commonly used servers. Please ensure that your time and date settings are correct before setup is attempted.

SMTP Email via Touch Panel

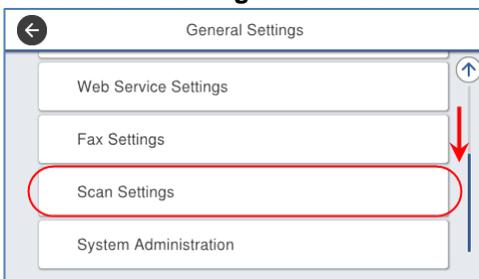

1) From your printer home screen scroll until you reach **Settings**, then select it.

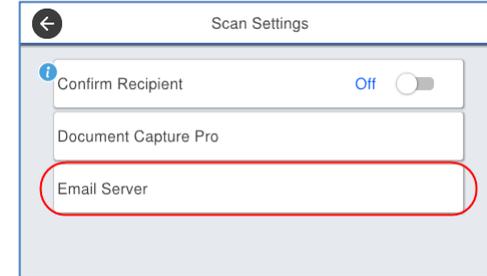

2) Select **General Settings**.

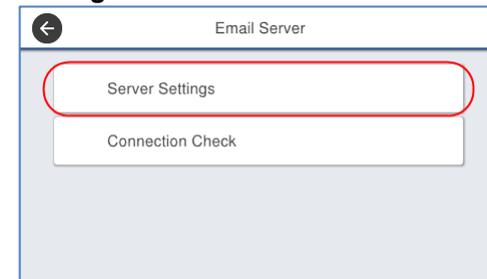

3) Scroll till you reach **Scan Settings** and select it.

4) Select **Email Server**.

5) Select **Server Settings**.

6) Select **SMTP-AUTH**.

SMTP Setup

- 7) You should now see the **Email Server Status** screen which will be requesting the following settings: **Authenticated Account**, **Authenticated Password**, **Sender's Address**, **SMTP Server Address**, **SMTP Server Port Number** and **Secure Connection**. These details are dependent on your email service provider; however we have the details for some common email providers.

Authenticated Account = Your Email Username ^{^1}

Authenticated Password = Your Email Password ^{^1}

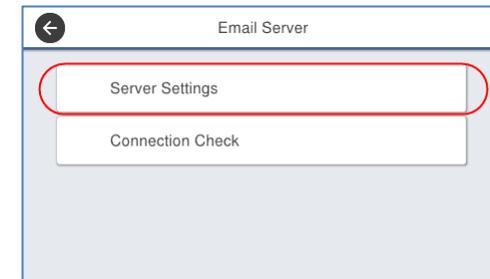

Sender's Email Address = Your Email Address

SMTP Server Address = [See list here](#) or contact your email service provider.

Secure Connection: None, STARTTLS or SSL/TLS. Use **None** if using port 25, **STARTTLS** if using port 587 and use **SSL/TLS** if using port 465. It is recommended to use port 587 with **STARTTLS** when possible.

^{^1} Not used if you selected **Email Authentication Method** to **Off**. This is often the case when using port 25.

- 8) Setup should not be complete, it is best to perform a connection check to confirm that everything has been configured correctly.

Still not working?

- Some providers like Gmail have additional security measures that may block other devices from using your email. For Gmail users this can be done inside the account settings page. To do this you will need to click on your initial in the top right, then click on **My Account > Signing in to Google**. Scroll down till you find the **Allow less secure apps** setting and set it to **on**.
- Double check that your settings are correct. Your email service provider should be able to assist you with this.
- Some of your questions may be answered in the **User's Guide** under the heading **Using an Email Server**. The **User's Guide** may be found in the downloads section of our website after you select your product: <http://tech.epson.com.au/downloads/>

Email Settings by Provider

Below you may find a list of SMTP settings for some common providers. Epson do not guaranty the accuracy of these settings. The following serve only as a guideline to assist. Please confirm the SMTP settings with your email service provider first before contacting Epson Australia. If you believe any of these entries are incorrect then please inform us.
