## ADVANCED PRINTHEAD TECHNOLOGY

MicroPiezo is an exotic, unique printing technology, developed by Epson. Its legendary performance, combined with its ability to support virtually any ink chemistry, has forever changed inkjet printer design. As a result, Epson is not driven by the technology, but uses its advanced technology to make possible what was considered impossible.

Epson's latest PrecisionCore print heads deliver outstanding image quality with maximum reliability using the minimum amount of ink. Unlike competing technologies which wear and change over time, PrecisionCore print heads are designed to produce the same output, day after day, with superior colour that is predictable and consistent. While some competitor heads are consumable parts that need to be regularly replaced with associated costs and downtime, Epson PrecisionCore print heads are permanent and covered under warranty.

## EPSON® SURELAB™ SERIES

The Epson® SureLab™ series is designed to enable fast and cost-effective photo production. They suit a range of applications including in-house imaging, studio and event imaging, Kiosk and Print-For-Pay operation. They produce durable high quality photo prints and can also be used for a range of value-added material including business and greeting cards, invitations and awards, menus and brochures. They have a lower running cost and output better quality that alternative Dye Sublimation technology. Unlike traditional Silver Halide equipment, they employ no chemicals, require no special handling, maintenance or waste disposal. They are easy to operate, require minimum space, and consume very little power.

# Epson Media

It's a magical moment when a blank sheet of paper is transformed into a print. Epson offers an extensive range of Photo, Fine Art, Production, and Specialty media in sheet and roll format. We take a quality base stock and apply a set of specially formulated coatings, which are designed to enable output with superior clarity, brightness, and colour accuracy, when used with nominated Epson printer and ink types. Please check the Epson website for product compatibility and specification details at www.epson.com.au

# Exceed Your Vision

As one of the world's most respected performance imaging companies, Epson has set the benchmark for print quality. And in many ways, the products shown in this range guide represent some of the most advanced forms of imaging ever developed.

This is what defines us. In short, it is the way in which we combine engineering and innovation, performance and everyday reliability.

From printing the most intricate photograph to the most precise architectural drawing, no other company has been so focused on developing imaging technology that inspires people to do amazing things.

## EPSON® SURECOLOUR™ T-SERIES

Epson's technical printers are designed to produce posters, POS, plans, drawings, maps, CAD, GIS and presentation material. Developed for business, education and retail applications, they are simple to use and feature low power consumption. They output ultra-fine lines and solid fills, with high brightness and colour density, using inexpensive ink that dries almost instantly to become moisture and abrasion resistant. They can be operated standalone or as part of a network complete with the latest security support. Most models feature scanner support (desktop and/or Large Format), while some provide job costing, remote management, optional Postscript and print server functionality.

## EPSON® SURECOLOUR™ S-SERIES

Epson's range of signage printers are designed to enable cost-effective durable imaging on a wide range of substrates. The combination of Epson Ink, Print Head, and image processing technology, enables production of material with truly exceptional quality. Our basic 4 colour models produce output that is equivalent or better than competitors with 7 or more inks and the ultimate in colour we have our S80 series with up to 10 inks and PANTONE™ certification.

## EPSON® SURECOLOUR™ F-SERIES

Epson's range of fabric printers enable production on a wide selection of natural and artificial fabrics. Dye Sub variants also support imaging onto hard surface materials that have been pre-treated or will accept a polyester spray. While most models use a simple 4 colour ink set, the high grade formulation, in conjunction with Epson Print Head and image processing technology, enables extreme tonal depth, colour gamut, and brightness levels. Selected models have additional white and/or florescent ink to provide a full spectrum of intense colour.
