When Epson dye sublimation inks are used in the SureColor SF9360 and applied to polyester fabrics, they meet the needs of Oeko-Tex Standard 100 for human ecological requirements of Class I products for adults, children, and babies up to 36 months. The standard specifies testing criteria for the presence of harmful substances within a textile product and belongs to the International Association for Research and Testing in the field of Textile Ecology (Oeko-Tex).

- Performance figures are printer speeds only; actual production times will vary depending on computing platform, print application/RIP, file type/format/size and networking configuration.
- Two HDK starter ink packs will be required for setup. The independent sourcing of a calendar press and ancillary heater/blower will generally also be required. Some software components including the Epson Accounting Tool will need to be downloaded from the appropriate Epson Web site. Important: not all software is Mac compatible (check website for details).
- Warranty is provided for all non-consumable and non-accessory items associated with printers sourced through Epson Australia. Cover includes print heads & CISS systems. It can be extended through the purchase of optional CoverPlus, either separately or as part of a configuration package. Free on-site repair is provided in major metro locations (non-metro locations will attract an additional traveling charge). Service is conditional on a range of factors including appropriate product usage, operation within print life limits, regular & appropriate user maintenance, as well as use of Genuine Epson consumables; please refer to the relevant Epson website for details.

Efficient production with single operator media loading, high-precision ATU, remote status notification & management

High capacity CISS notifies the operator when a tank is low and can be refilled while printing continues

Uses the latest HDK colour set with ink shipped in cost effective 1 L packs
